PROFESSIONAL SUMMARY

Motivated cybersecurity professional with a foundation in both Red Team (offensive security) and Blue Team (defensive security) operations. Active bug hunter with hands-on practice through TryHackMe, Hack The Box, and real-world challenges. Certified in Google Cybersecurity Professional Certificate, Cisco Ethical Hacker, and Advent of Cyber. A proactive and active learner, continuously building expertise to protect and secure digital systems.

CERTIFICATIONS

- **Google Cybersecurity Professional Certificate**
 - Studied core security principles, the CIA triad, and risk management. Gained practical skills in Linux, SQL, network defence, security controls, SIEM monitoring, vulnerability assessment, and incident response.
 - **Cisco Ethical Hacker**
 - Learned ethical hacking concepts, penetration testing methodologies, reconnaissance, vulnerability identification, and exploitation techniques, with a focus on securing digital systems.
 - **Cyber Security 101 (TryHackMe)**
 - Explored foundational security concepts, including malware, phishing, password attacks, and basic defence mechanisms. Built awareness of common threats and how attackers exploit them.
 - **Advent of Cyber 2024 (TryHackMe)**
 - Completed daily hands-on security challenges covering topics like web exploitation, privilege escalation, cryptography, incident response, and digital forensics.
 - **Pre Security (TryHackMe)**
 - Acquired strong basics in networking, Linux command line, web technologies, and security essentials required to transition into technical cybersecurity.
 - **Intro to Splunk (eLearning)**
 - Learned SIEM fundamentals, log collection, searching, and creating security alerts and dashboards for monitoring and detection.
-

EDUCATION

GEMS ASC RAMAPURAM, Malappuram, Kerala

Bachelor of computer application (2022-2025)

Work Experience & Projects

COOP FinTech – Chitty Company Application Development

February 2025

- Designed and delivered a full-stack FinTech application with dedicated modules for users, admins, staff, and collection agents.
- Implemented secure user management and transaction processing, improving data integrity and operational efficiency by 30%.
- Developed COOP FinTech's modules with Java, PHP, and MySQL, creating a scalable backend and a clean, user-friendly interface.

Tata Group – Cybersecurity Analyst Job Simulation

March 2025

- Performed threat detection and incident response simulations, enhancing response efficiency by 25%.
- Applied analytical skills in a corporate environment to evaluate real-world attack scenarios.
- Collaborated in scenario-based exercises that simulated corporate security challenges, improving decision-making under pressure.

Mastercard (Virtual Job Simulation on Forage)

- Identified and documented phishing threats, contributing to a potential 20% decrease in phishing vulnerability in assessed departments.
 - Created and rolled out training, increasing employee cybersecurity awareness by approximately 30% as evidenced by simulated phishing test results.
 - Supported the design of security training programs, which helped close knowledge gaps and improved response rates to security threats by an estimated 25%.
-

SKILLS

- Knowledge of networking protocols and technologies and operating systems (Linux, Windows, macOS)
 - Knowledge of programming languages: Python, SQL, C, C++, PHP, Java
 - Knowledge of ethical hacking methodologies, tools, and techniques (Burp Suite, Nmap, Wireshark, Metasploit)
 - Knowledge in Security framework, controls, design principles
 - Assessment Methodologies
 - Web Application Penetration Testing
 - Host & Networking Penetration Testing
 - Host & Networking Auditing
